- Roll Call for Duty
- Location and Call History
- Traffic Stops and Radio Log
- Person, Place and Vehicles History
- Common Place Name lookup
- Print CAD Event Cards and more....

# “No Charge”

## Computer Aided Dispatch

### For Populations under 25K

ezEnterpriseCAD Lite Computer Aided Dispatch is an innovative multi-user, multi-agency Enterprise Dispatch software solution for smaller Police, Fire, EMS agencies or PSAP's with less than 25K population. Lite is free for One (1) position, built on the Microsoft®.NET platform and packaged with SQL Server Express technology for ease of use out of the box. Lite simplifies the Emergency Response record keeping and reporting process for smaller, more rural agencies with fewer calls for service and strained budgets. Lite offers no interfaces or mapping software and operates standalone on One (1) PC, or in a client Server Model with additional charge. The client server model will require basic IT knowledge and support. Customer is responsible for all hardware, installation, training and local support.

Lite is offered free of charge and comes with self serve installation instructions and documentation. Factory Support is available for an hourly fee.

ez911 also offers Standard and Premium versions in an Annual Subscription program that provides escalating functionality, mapping, interfaces, hardware options, engineering, installation and various levels of support. You can start small and grow as needed. We also offer NG9-1-1, Mapping, Radio Console and support services.

## Service Features and Benefits

At ez911, we believe that every emergency dispatch agency and PSAP, regardless of their size or budget, should expect more from their technology provider. Since 2005, our mission has been to reduce emergency response technology complexity and cost, focusing solely on the features and functionality that matters most. By simply addressing each product, whether its building and editing maps, addressing counties for 9-1-1 service, or creating easy to use CAD and Mapping capabilities. We start by eliminating feature creep and bloat-of-legacy systems that allows us to create and offer simple yet incredibly efficient and cost-effective solutions.

## System Requirements

### SERVER (client server model only)

- Modern Midrange Server
- 32 GB RAM
- Windows Server ver 20
- SQL Express (provided by ez911)

### WORKSTATION(s)

- Modern Workstation
- 16 GB RAM or higher
- Mice and Keyboard
- WindowsPro 10
- Monitors of choice

### NETWORKING

- 16-Port Gigabit Switch(s)

Hoover, AL 35242

Phone : 800-656-6025
